

Make Your Building Smarter, And Your Business Better

Behold is a wireless, plug-and-play platform for integrated building automation. Built for small and medium commercial facilities, it uses diagnostics and analytics to give you a real-time picture of your building systems.

Know More, Save More

The Behold Control Platform offers an unprecedented level of control, with centralized monitoring and harmonized system-wide algorithms, reducing operating costs by as much as 30%.

Usability

- Intuitive web-based dashboard
- Mobility and remote access
- Wireless cloud connectivity
- Secure, multi-user access through role-based authentication

Operational Control

- Modify systems operation based on analytics
- Perform remote diagnostics
- Enhanced control through system scheduling

Notifications & Alerts

- Automatic notification algorithm

Monitoring

- Degradation & continuous commissioning algorithms

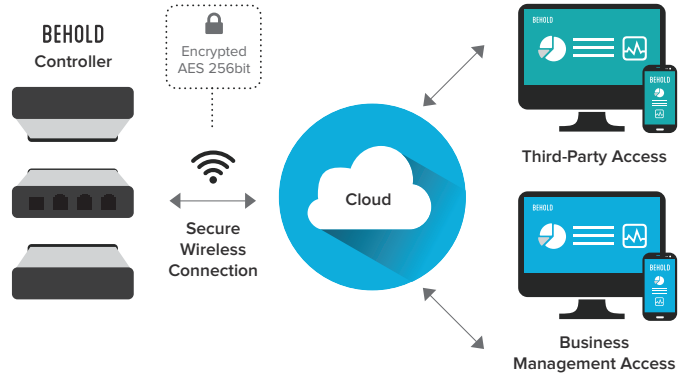

The Behold Control Platform

Your eyes inside the box

Behold is an end-to-end solution made up of three core elements:

- Plug and play hardware: Embedded sensors and processors let you see exactly what's going on in your systems.
- Cloud-based connectivity: Data is stored and analyzed in the cloud, letting you manage Behold from anywhere.
- Smart software: Intelligent monitoring and analytics makes optimization a breeze.

All three components of the platform are designed with collaboration in mind, so you can optimize individual systems and set up interactions across your equipment.

Effortless Building Automation

Plug-And-Play Hardware

Behold is built on open, standards-based technology, making it more flexible than any other HVAC solution on the market. Behold fits any environment and works right out of the box.

Remote Connectivity

Behold is equipped with mobile and cloud-based control capabilities. You can modify your HVAC systems, analyze performance, and receive any necessary alerts when something goes awry. With a single login, manage multiple building systems and various sites.

Dashboard

The Behold dashboard is intuitive and user friendly. Through a single interface, you get a complete picture of your system's status including scheduling patterns, energy usage, maintenance requirements, failure analysis, and performance data.

Behold's Greatest Strength Is That It's Socially Enabled

It's an end-to-end platform that:

- Controls multiple systems from a single management interface
- Enables centralized monitoring and harmonized, system-wide algorithms
- Provisions multiple internal and external users, providing access to real-time control diagnostics and reporting data
- Offers remote monitoring to wirelessly optimize systems through degradation monitoring, continuous commissioning and notification algorithms
- Connects with other building management systems, energy platforms and energy providers, giving you scalability, and flexibility for future implementation

Behold Makes Buildings Smarter. Realize The Benefits Today:

5-10

years of extended lifespan with proactive maintenance of HVAC equipment.

80%

of emergency calls eliminated with remote monitoring.

10-20%

energy savings with firm operating schedules.

10%

of the cost of enterprise automation systems & built for your small to mid-sized facility.
